

Something You Need to Know about Your Rockbreaker!

As the owner of a Rammer Rockbreaker you are operating one of the most efficient rockbreakers on the market with a long reputation for having the lowest total cost of ownership of all premium breakers.

Constant and High Breaking Power

Rammer's sealed high pressure membrane accumulator system is gas leakage proof, which means

- reduced downtime and safety risks as gas re-fills are not required between major servicing
- constant and high breaking power

Reduced Breaking Times

Rammer's patented Fixed Blow Energy operating principle ensures every impact - from first to last - is at maximum power, regardless of oil flow, reducing breaking time and maximising productivity.

Reliable and Productive

With industry leading reliability combined with exceptional impact energies, Rammer Rockbreakers are number one in hard rock and mining applications.

- Rammer 2577 - 4035J * * Rammer
- Rammer 3288 - 5200J * Factory
- Rammer 4099 - 8050J * Verified

Rammer Rockbreakers maintain their impact energy at all times as they do not leak gas. Gas leakage means loss of impact energy as well as downtime and additional cost due to regular re-gassing.

With Rammer Rockbreakers you can maximise productivity and complete the job without unnecessary interruptions.

To maintain your Rammer Rockbreaker in peak condition and preserve your factory warranty give us a call today!
