

SIMEX PLANERS

The advantages of the SIMEX planer really are countless. The SIMEX PL High depth planers are perfect for stabilising and rehabilitating existing worn or damaged roads and streets. SIMEX Stabilisers can pulverise, crush and mix road base with additives such as lime, cement, fly ash or other binding agents to a depth of 350mm. When scarification of urban surfaces, asphalt milling or asphalt pothole repair is required the Simex PL Self Levelling Planers maintain constant depth in all conditions guaranteeing precision levelling of surfaces and perfect planer grip in the presence of uneven grounds, pavements, rises, bumps and sloping surfaces.

Hydraulic high displacement radial piston motors with direct cutter drum drive maximise their performance. The patented lateral support slide design guarantees maximum stability and minimal material spill outs reducing the impact resurfacing has on the environment. Maintenance costs are also minimal requiring only the replacement of worn teeth. They are available in a range of models reaching a maximum width of 1,200mm and depth of 350mm. They can be fitted to skid steers, hydrostatic drive and backhoe loaders.

What is smoking hot though about SIMEX Planers is the ingenious innovation of Walkers Hammers who have reconfigured the wiring allowing the 8 hydraulic

functions including depth left to right, tilt, side shift and also the left to right functions to be controlled inside the cabin by the operator using the joystick. Three additional switches have been fitted to the joystick enabling control of the on/off function; the water tank operation and the safety switch for drum activation and float function.

To date, almost 30 integrated wiring jobs predominantly for Bob Cat, Caterpillar D-series and Mustang skid steers have been completed. The wiring, relaying and switching gear are all covered by OEM's warranty program and Walkers Hammers will always leave the original wiring loom in the machine to ensure other attachments can be plugged straight in to the original socket.

In Australia customers are supported by the following independent network of highly experienced Simex dealers:

- VIC/TAS: Walkers Hammers
- NSW: Ground Tec Equipment
- WA: Total Rockbreaking Solutions
- QLD: QLD Rock Breakers
- SA/NT: Renex Equipment
