

product & services overview

Walkers Hammers is the authorised dealer in Victoria, South Australia and Tasmania for Rammer, Simex, ALLU, PneuVibe, GTS and TEFRA products.

Walkers Hammers

HYDRAULIC ATTACHMENT SPECIALIST

We specialise in servicing the requirements of the construction, quarrying, mining, demolition, civil works, earthmoving and landscaping industries and offer trusted advice and support to all customers whether you are purchasing, hiring or requiring commissioning, maintenance or repair for your hydraulic equipment.

Regardless of the application, by choosing the right attachment for the task at hand is not only safer, it reduces downtime, lowers operating and lifetime ownership costs of your machinery and, most importantly, help you reduce cost per tonne of material moved.

To ensure optimal and safe operation it is important the attachment is within the lifting capacity of your carrier.

Our experienced staff will help you identify a range of suitable attachments for your carrier, choose the correct size attachment and maximise the life of your investment.

increased uptime

Getting the work done reliably and on time is essential and therefore we have selected only industry leading manufacturers, allowing you to choose from a range of quality and reliable products that can operate in harsh conditions without missing a beat.

With features such as membrane technology, simplified maintenance, automatic lubrication and wear-parts that are quick and easy to change our products will help you reduce downtime and operating costs.

maintenance onsite and off-site

Maintaining a regular servicing schedule is the best way to ensure your equipment performs at its optimal efficiency, and to prolong the life of your investment. It also helps you avoid unnecessary downtime.

Our experienced technicians rebuild, service and repair hydraulic attachments and boom systems in all makes and models in our custom designed workshop.

Four fully equipped onsite service vehicles are available whenever an emergency repair onsite is required.

As the authorised dealer in Victoria, South Australia and Tasmania for Rammer, Simex, ALLU, PneuVibe, GTS and TEFRA, we can ensure that our existing and new customers receive the industry's highest-quality support, while enjoying the industry leading performance and reliability they have grown to expect from these products.

Browse our product range in this brochure and we look forward to working with you to find the best solution for your next project.

Authorised dealer in Victoria, South Australia and Tasmania for
Rammer | ALLU | Simex | PneuVibe | GTS | TEFRA

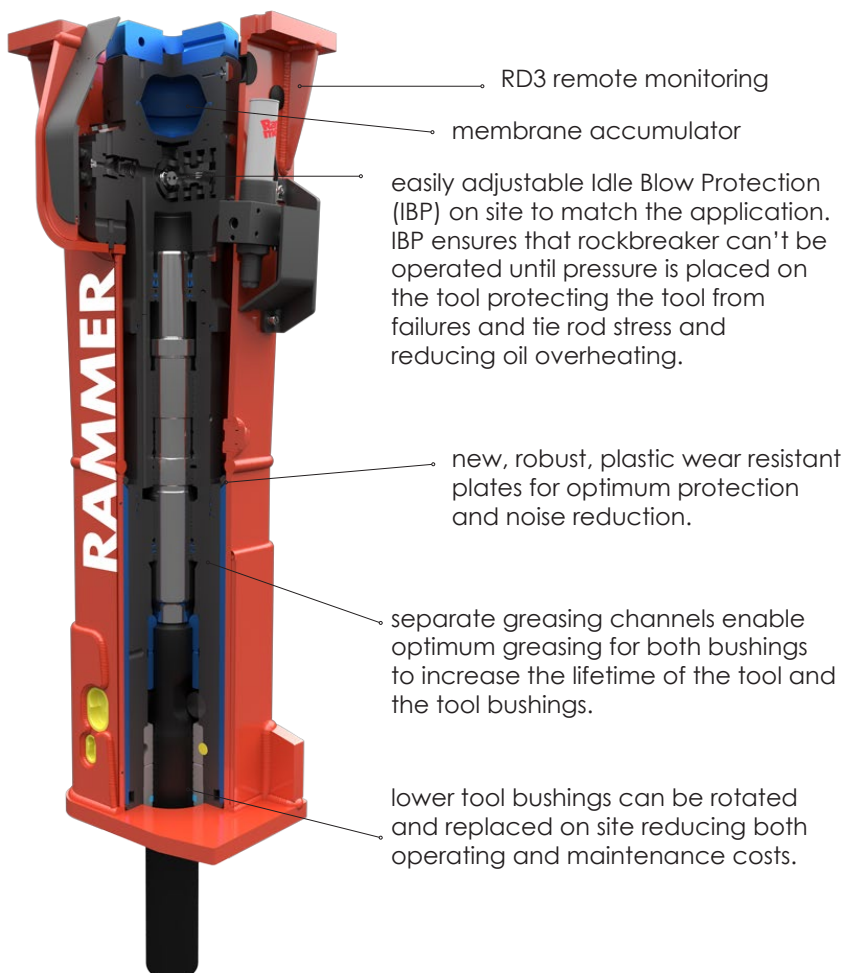

Rammer is not just hitting harder,
it is hitting constantly harder.

Rammer hits harder

With Rammer's sealed high pressure membrane accumulator system constant and high breaking power is maintained at all times because the membrane accumulator is gas leakage proof. It does not require re-fill or any special sealing system making Rammer rock breakers a reliable and productive partner for your carrier, particularly in remote locations.

reduced breaking times

Rammer's revolutionary 'Fixed Blow Energy' operating principle combines stroke length, blow energy and a patented idle blow protection feature, allowing rock-breakers to be adjusted to match individual carriers and applications, giving improved hydraulic efficiency and safety.

RD3 remote monitoring

membrane accumulator

easily adjustable Idle Blow Protection (IBP) on site to match the application. IBP ensures that rockbreaker can't be operated until pressure is placed on the tool protecting the tool from failures and tie rod stress and reducing oil overheating.

new, robust, plastic wear resistant plates for optimum protection and noise reduction.

separate greasing channels enable optimum greasing for both bushings to increase the lifetime of the tool and the tool bushings.

lower tool bushings can be rotated and replaced on site reducing both operating and maintenance costs.

This simply means that every impact –from first to last – is at maximum power, regardless of oil flow or frequency, reducing breaking time and maximising productivity.

Rammer hits smarter

All Excellence line of Rammer rock breakers come with RD3 remote monitoring system and together with SAM platform you can monitor your rockbreaker fleet remotely 24/7.

With this cloud-based system you can pinpoint the exact location of your equipment, monitor correct usage and operating hours to manage service periods for proactive and preventative maintenance.

Rammer rockbreakers are suitable for carriers of 0.6 to 120 tonnes.

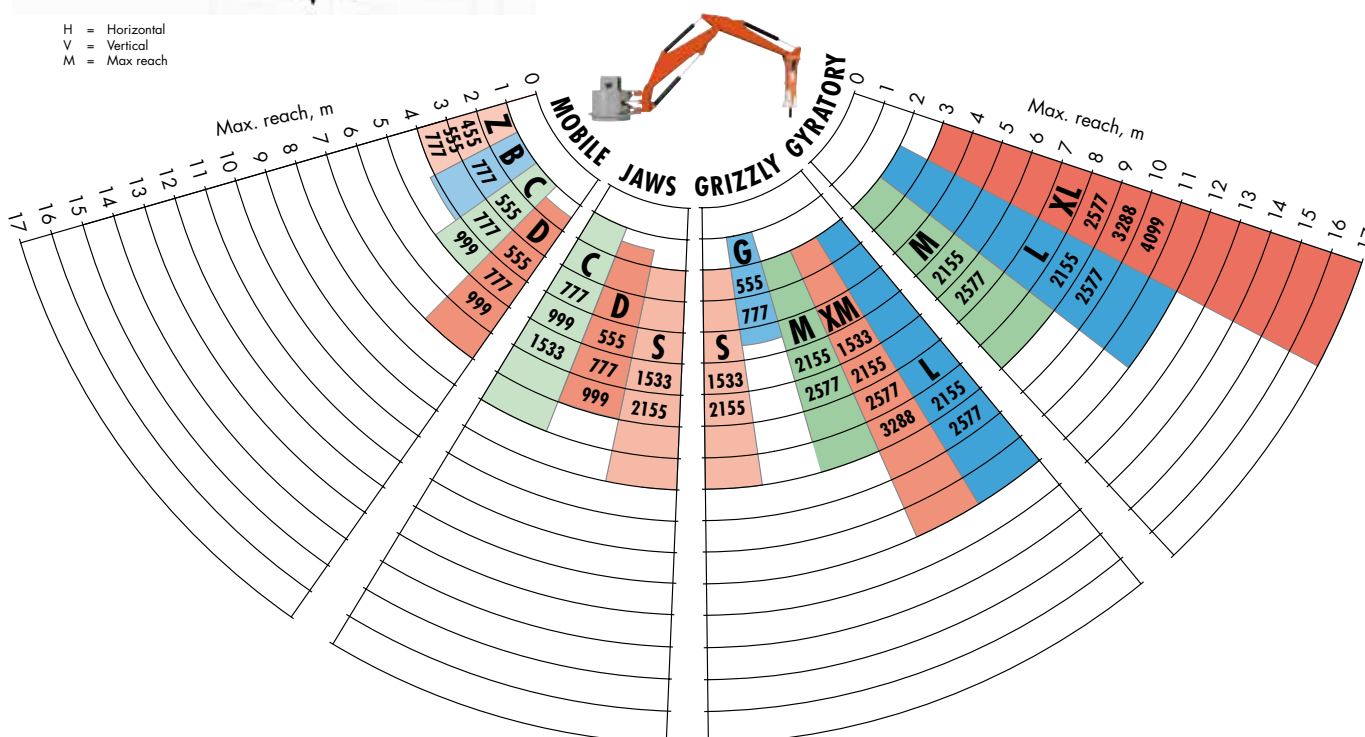

For specifications visit our [website](#).

The Rammer Boom range has 28 models from 1t up to 18t heavy duty models. With reaches from 1m up to 17m there is a boom to suit all types of mining and quarrying applications. For specifications visit our [website](#).

We will help you select the right boom, rockbreaker, correct controls and power pack to match your requirements.

demolition made easy

The range of Rammer Demolition Attachment Tools have been designed to meet the specific and ever-changing needs of various demolition applications, including primary and secondary demolition, crushing, cutting and material separation.

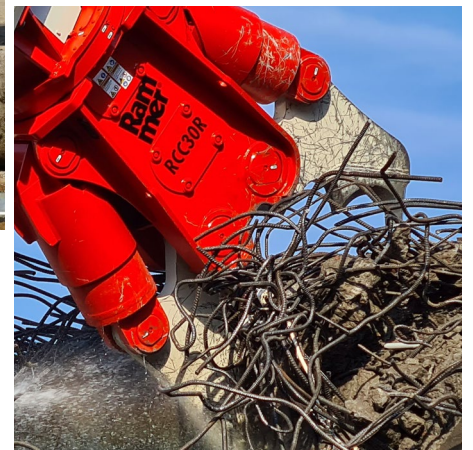

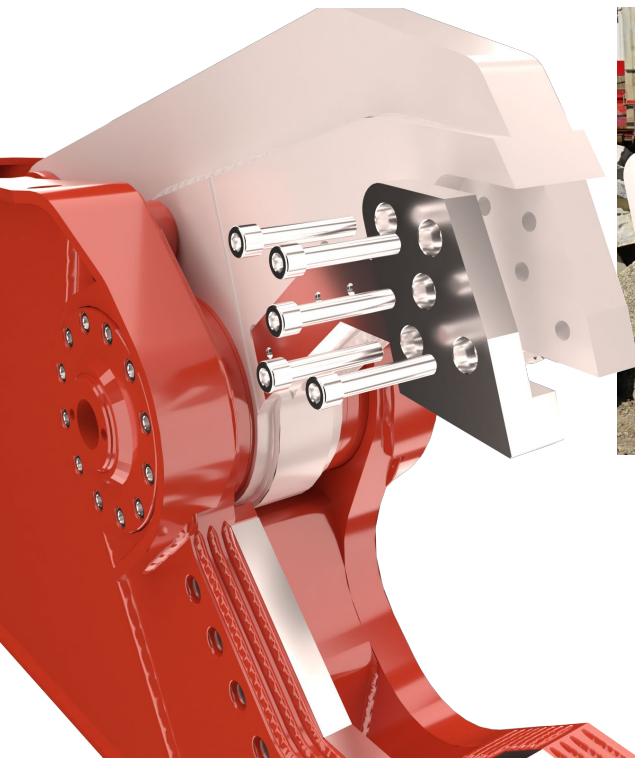

These versatile tools have features such as:

- central pin adjustment to prevent jaw deviation,
- jaw design that allows crushed material to fall away from the cutting or crushing area,
- cutting blades that have four usable and reversible sides and
- tips that can be replaced without welding.

These and many other features will help you minimise maintenance and maintain high productivity levels during the whole demolition task.

Transform construction debris into reusable material in one-step

ALLU Transformers are purpose built hydraulic attachments for efficient material processing by reducing the number of process steps needed and transforming waste into useable material.

Versatile ALLU Transformer will process just about anything. Wet or dry. And with one ALLU you can produce multiple fragment sizes, with various blade and drum configurations.

For specifications visit our [website](#).

1. ALLU transforms your base machine into a mobile processing plant
2. ALLU's one cycle takes less than 1 minute*
3. ALLU transforms waste into useable material for road construction or landscaping
4. ALLU's efficiency reduces transportation and landfill costs

*) ALLU DH3-17 TS35 with standard TS blades attached to CAT 336

TRANSFORMER.™

SIMEX attachments help you work faster and safer whether your task is road maintenance, pothole repair, trenching, construction of underground utilities, tunnel excavation, quarrying or rock wall and concrete profiling.

increase productivity

self levelling planers -
constant milling depth

Simex planers will make planing tasks quick and easy featuring:

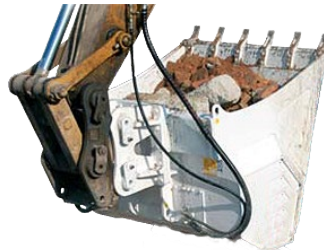

- Constant milling depth regardless of the ground contour.
- Perfectly even surfaces with side-by-side milling.
- Reduced dust with built-in water tank that is built into planer's frame rather than being mounted remotely ensuring safe and quick operation.

Available in a range of models that reach a maximum width of 1,200 mm and depth of 350 mm.

Multi-fit bracket to fit any skid steer or loader.

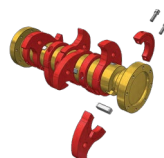

crusher buckets -
turn waste into usable material

Turn crushable waste material such as bricks, concrete, glass, reinforced concrete, natural aggregates, tiles and asphalt slabs into usable material on your construction/demolition site.

Or dispose with improved efficiency, as the crushed material takes up less space, utilising the full capacity of the truck.

Crushing teeth are easy to change to produce crushed material in different sized pieces: 0-50/100mm.

Suitable for carriers between 7 - 55 tonnes. CB range can be mounted on skid steers.

twin headers -
low noise and vibration

Twin headers are ideal for:

- trench work in hard and compacted ground,
- concrete and rock wall profiling,
- dredging and demolition,
- quarry work with a variety of rock, including limestone, gypsum or schist with rocks having a hardness of up to 85 MPa.

Twin Headers produce very little vibration making them perfect for vibration sensitive work.

Suitable for excavators between 1.5 - 70 tonnes.

SIMEX

trenching wheels - fixed section trenching

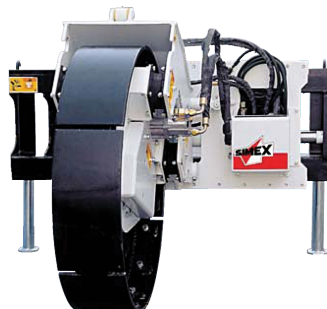

Featuring a high level of visibility, wheel protection at all depths and hydraulic piston motors with direct drive, Simex Trenching Wheels provide you with safety and high performance when precise cutting on hard surfaces is required - up to a maximum depth of 800mm and width of 30-250mm on asphalt, concrete and rock.

Suitable for skid steer loaders, backhoe and compact track loaders.

compaction wheels - maximum safety

With Simex Compaction Wheels a firm, even and extremely compact bed will be achieved that is essential for the durability of the trench preventing the road surface from caving in, maximising road traffic safety.

available in different wheel widths that are quick and easy to change to compact trenches of different widths from 200mm to 400mm.

Suitable for skid steer loaders, backhoe and other loaders.

asphalt floats - ten times quicker

Complete the task cleaner and up to ten times quicker than manually as asphalt is simply placed on the ground in front of the Float and spread directly.

Simex Asphalt Floats have a maximum paving width of 1.70 metres and depending on the model, they can extend laterally up to 1.02 or 1.62 metres outside the wheel i.e. for sidewalk asphalt surfacing.

Suit skid steer loaders, as well as backhoe loaders and front-end loaders with a max width of 1600mm.

For specifications visit our [website](#).

Using the right attachment for the task is not only safer, it reduces downtime, lowers operating and lifetime ownership costs and, most importantly, helps you reduce the cost per tonne of material moved.

safety and efficiency

PneuVibe Compactor Plates

Whether you're working in a narrow trench or have a large backfill operation or compacting around tanks, PneuVibe Compactor Plates provide a safe and effective method to compact soil.

With optional clamping device you can also drive posts from 50mm to 300mm diameter.

Suit carriers from 1.5 to 40 tonne.

GTS Rock Saws

Lightweight, strong and robust design with bi-directional blade rotation makes this ultimate cutting machine ideal for a variety of applications.

Suit 1.5 to 40 tonne excavators, with cutting depths from 410mm to 950mm.

TEFRA Quick Hitch

A fully automatic dual positive lock hydraulic Quick Hitch has been designed to eliminate the risk of attachment separating from the Quick Hitch.

With only three moving parts and innovative technical safety features such as Dual Locking, Smart Valve, Single cylinder design and Failure Indicator have made TEFRA the most reliable and safest Quick Hitch on the market.

Suit excavators from 3 to 120 tonne.

Walkers Hammers' difference

EST. 1989

Industry knowledge and experience

With an extensive experience in excavator attachments we specialise in servicing the requirements of the construction, quarrying, mining, demolition, civil works, earthmoving and landscaping industries.

Our focus is in the supply of reliable and effective excavator and skid steer attachments that help you reduce downtime and improve safety.

Authorised dealership

Walkers Hammers has been the exclusive authorised dealer in Victoria and Tasmania for Sandvik Rock Processing Solutions' range of Rammer hydraulic breakers, demolition tools and boom systems since 1998 and in South Australia since early 2022.

Appointments to the authorised dealer also for ALLU, SIMEX, PneuVibe, GTS and TEFRA brands and focus on providing our customers with the best possible repair and maintenance service has made Walkers Hammers a true 'one-stop-shop' for hydraulic attachments and boom systems today.

Passion for customer service

Our experienced technicians will maintain your hydraulic attachments in peak condition regardless of the make or model. With our 10 tonne overhead crane we have the ability to service even the largest breakers in our workshop. Four fully equipped onsite service vehicles are readily available whenever an emergency repair onsite is required.

We stock and supply a comprehensive range of genuine tools and parts for all your needs or required for servicing your attachment.

Our technicians and are happy to provide you with professional technical advice when needed and help you select the correct tools and parts for your attachment and application.

Hire choice

Most of our product range can also be hired. It is a flexible and hassle-free option if you want to try before you buy.
