Tailored training for Rammer crews

Rammer continues to strengthen the capability of its global dealer network through technical training programs.

Hydraulic attachments specialist Rammer is ensuring its service teams are equipped with the latest product innovations, service protocols, and application knowledge to support mining operations worldwide.

Delivered across key regions, Rammer's training courses combine in-depth theoretical instruction with practical, hands-on workshops.

Product specialists from the Rammer factory in Finland work with dealer technicians, sharing technical insights and addressing real-world operational challenges. This collaborative approach enables solutions to be tailored to regional operating conditions encountered in mining and quarrying environments.

The value of this training is demonstrated in the field through fit-for-purpose service solutions delivered by authorised dealers.

For example, the Total Rockbreaking Solutions service team in Western Australia recently modified a Rammer XL1200 boom system by relocating the RamLube II automatic hammer greasing system.

TRS Engineering Manager Paul Ingleson said that by repositioning the unit away from

potential impact and damage within the crusher area, the modification improved protection of the lubrication system and extended its service life in a demanding mining application.

TRS also completed a series of safety and serviceability upgrades on a Rammer HU45 Power Pack to meet specific site requirements, reinforcing Rammer's commitment to supporting customer operations through compliant, site-ready solutions.

With a dealer network spanning more than 60 countries, Rammer provides customers with access to global product expertise and responsive technical support.

Trained dealers support mining operations by recommending the optimal rockbreaker configurations as well as tools and genuine parts to suit each application. They also offer factory-approved maintenance and warranty services that ensure Rammer products continue to contribute to customers' profitability throughout their working life.

This focus on long-term customer support has established strong dealer-customer relationships across global mining markets. //EE

Rammer is part of Sandvik Rock Processing Solutions within the Sandvik Group.
