

ALLU SKID STEER CRUSHER

Thanks to the dynamics of the movement of our mobile jaw, this crusher model supports crushing in 2 directions, “forward” and “reverse”. Work in “forward” mode: it is suitable for dry material and larger pieces.

Work in “reverse” mode: you get better results on wet material and especially on asphalt, keeping the jaws clean of material that sticks to them.

The operator can easily choose the most suitable mode to grind and switch immediately if necessary.

The **change of granulometry** is fast, with a crushed material output range between 0 and 80 mm.

We have added a **new system of dampers**, thus achieving a very important acoustic reduction, as well as a lower vibration of the base machine.

The **direct drive** of the hydraulic motor reduces mechanisms and it is free of belts, and reducing the maintenance requirements.

The end result is a tireless crusher that offers you **much higher productions than expected** in this type of base machine.
